

# Kareena Raghubans

Orlando, Florida | 407-697-6327 | karaghubans@gmail.com | kareenaraghubans.com | github.com/JumDum1101

## EDUCATION

University of Central Florida, Orlando, FL — *Bachelors in Computer Science (Accelerated B.S./M.S. Program)*

August 2023 - May 2027

- Graduate-Level Focus: Machine Learning & Artificial Intelligence
- Pursuing a minor in Statistics
- Relevant Coursework: Data Structures and Algorithms, Processes for Object Oriented Software Development, Categorical Data Analysis, Machine Learning, Artificial Intelligence
- GPA: 3.67

## EXPERIENCE

Software Engineer Intern, Orlando, FL — *Leidos*

May 2026 - Present

- Developed enterprise application features using JavaScript and React for a platform focused on consolidating business practices and workflows.
- Built and maintained backend REST APIs and wrote Oracle SQL and Microsoft SQL Server scripts to support application functionality and data needs.
- Contributed to an Agile methodology adherence platform using React and TypeScript for the frontend and Java for the backend, helping teams evaluate and improve their development practices.
- Researched Agile metrics and methodologies, including burnup charts and Cumulative Flow Diagrams (CFDs), to determine how project data could be presented to users to highlight workflow trends, bottlenecks, and areas for improvement.
- Collaborated with engineers in an Agile environment to research requirements, develop features, and enhance enterprise applications.

Software Engineer Intern, Orlando, FL — *CodeNook*

April 2024 - August 2024

- Developed AI-powered React components for customized content generation.
- Leveraged AWS Cognito to create custom authentication and manage user data. This allowed us to seamlessly grow from 2 -13 customers.
- Integrated the OpenAI API for AI-generated social media content.
- Leveraged AWS Simple Notification Service via an AWS Lambda function that gave us the ability to let users know when their account has been credited on a monthly basis.
- Collaborated through GitHub and Agile development practices to deploy production features and resolve issues quickly.

## LEADERSHIP & INVOLVEMENT

Girls Who Code — Mentor, Orlando, FL

August 2024 - Present

- **College Mentorship (September 2025 – Present):** Mentoring first-year college students, focusing on strengthening foundational programming skills, academic support, and introducing best practices for collaborative coding and career readiness.
- **High School Mentorship (August 2024 – March 2025):** Guided high school students with no prior coding experience in learning coding fundamentals (Python, Java, and web development) and fostered early interest in technology by making coding approachable and fun.

## PROJECTS

Crochet Chart Parser & Interactive Learning Platform — Senior Design

August 2026 - Present

- Annotating crochet chart datasets and researching methods to train a computer vision model to recognize stitch types, positions, and spatial relationships within visual patterns.
- Designing the application’s UI in Figma and developing plans for a React and TypeScript interface that allows users to upload patterns, view generated instructions, and follow crochet charts interactively.

Forest Cover Type Classification Using Logistic Regression and Decoder-Only LLMs

April 2026

- Built and evaluated Logistic Regression and DistilGPT-2 models on the 581K-sample UCI Covertypes dataset.
- Reformatted structured tabular data into prompt-based inputs for decoder-only LLM training.
- Implemented preprocessing, feature scaling, class balancing, and hyperparameter tuning.

Cairos – Scheduling & Availability Platform

December 2025

- Developed a full-stack scheduling platform using React, TypeScript, Node.js, Express, and MongoDB that aggregates user availability and computes optimal meeting times using constraint-based scheduling logic.
- Designed and implemented RESTful APIs for availability processing, booking workflows, and conflict detection. Integrated the Google Calendar API for real-time synchronization and built secure email-based authentication using SendGrid.

Atticus – AI Legal Assistant

October 2025

- Designed a multi-stage LLM pipeline using Google Gemini to classify, summarize, and extract structured outputs from unstructured legal client data
- Implemented prompt engineering techniques to improve response consistency and reduce hallucinations
- Integrated authentication (AWS Cognito) and secure storage (Firebase Firestore)
- Built API layers in Node.js to manage model interactions and structured data flow

## LANGUAGES

Python, C, Java, JavaScript, HTML, CSS, SQL, PHP, Typescript, R

## LIBRARIES

NumPy, Matplotlib, Pandas, Scikit-learn

## FRAMEWORKS

Node.js, React.js, Express.js, Angular, Tailwind CSS

## TOOLS

Visual Studio, Atom, Eclipse, Figma, Jupyter Notebook, Twilio, Trello, Git, GitHub, Hugging Face Transformers, DistilGPT-2

## DATABASES

MySQL, PostgreSQL, MongoDB

## CLOUD

Amazon Web Services, Firebase

## AWARDS

UCF Dean’s List, Fall 2023, 2024, Spring 2025

NCWIT Rising Star, 2023

Florida Bright Futures Academic Scholar, 2023

UCF Provost Scholar, 2023

## EVENTS

WITCON 2026

KnightHacks 2025

Lockheed Martin Code Quest 2022 Novice Division Orlando, FL -Placed First
